Exploring Technology in the Classroom

Terry Quiett
Center for Academic Technology
Memorial Library
Southwestern College
Winfield, KS 67156

In this workshop we utilize readily available software to visualize how science and art intersect to create new paths to learning. Participants in this workshop will explore how software can enhance teaching. They learn about presentation software (PowerPoint), web page creation software (FrontPage 2000), basic design elements, and have the opportunity to enhance their learning through group discussions. Handouts will be supplied.
